Page 2 de 37

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ ! = série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ ! = série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.

woensdag 23 augustus 2017

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ != série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.

woensdag 23 augustus 2017

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ != série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.

woensdag 23 augustus 2017

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ != série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.

■ lq : limite de quantification ■ n = nombre de mesures annuelles ■ min = minimum ■ p10, p50, p90 = valeurs percentiles ■ moy = moyenne ■ max = maximum ■ \* = nombre insuffisant de données pour le calcul (pour une explication du pictogramme utilisé : voir la dernière page de ce rapport) ■ != série de mesures en partie ou totalement établie par évaluation de valeurs par réseau de neurones artificiels. Selon la fréquence de mesure, les valeurs dans les tableaux sous les diverses colonnes mensuelles peuvent être aussi bien des valeurs individuelles que des valeurs moyennes. Toutefois, pour le calcul des indicateurs statistiques, les valeurs individuelles mesurées sont toujours utilisées. Ces valeurs individuelles peuvent bien entendu nous être demandées.
